

Introduction

QuantMig Migration Data Inventory

The project *QuantMig: Quantifying Migration Scenarios for Better Policy* has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 870299

The QuantMig project

(www.quantmig.eu)

- **Aim:** To produce comprehensive, multi-perspective and robust **quantitative** migration scenarios to support EU migration policy
- **Approach:** Developments in in conceptualising, explaining, estimating and predicting migration
- **Key themes: complexity and uncertainty**

QuantMig

Why a migration data inventory?

- Increasing demand of researchers and policymakers alike to **improve the evidence base** on current migration situations, but also of migration foresights
 - Cf. Global Compact for Migration (Goal 1)
- For historic, contemporary and predictive migration modelling, **‘good’ migration data** on migration flows and migrant stocks is a key input.
- What is ,good‘ migration data?
 - It exists (=collected)
 - It is accurate (=error-free)
 - It is reliable (=consistent)
 - It is comprehensive (=free of missings)
 - It is comparable (=harmonised)
 - It is purposeful
- Is ,good‘ migration data all that we need?
 - No.
 - We need (a) good theory, (b) good models, (c) and good data (cf. QuantMig D1.1, Bijak/Czaika 2020)

Objectives of the QuantMig migration data inventory

- Overview: what migration data is out there?
 - This meta-database is constructed to offer users a **structured overview and access to the data sources** that can help understand, explain and predict migration to, from and within the EU.
- User-friendliness
 - This meta-database is explicitly taking a **user's perspective** in compiling and assessing the different data sources. Its purpose is not only to catalogue existing datasets on migration to, from and within the EU, but also to **provide key information on each dataset** that may be relevant for the user.
- Quality assessment
 - We aim to strike a **balance between relevance, comprehensiveness, and user-friendliness**. This inventory also includes information on different **quality criteria**, which can help users to identify the appropriate datasets.

QuantMig Migration Data Inventory

The project *QuantMig: Quantifying Migration Scenarios for Better Policy* has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No. 870299

QuantMig

Overview

- Selection criteria
- Search strategy
- What characteristics of the datasets we show
- Quality assessment
- Website demonstration
- Future

Selection criteria

- Migration to and within EU – cross-national
 - Stock/flow, quantitative data, including surveys
 - Country level
 - Not older than 2000
 - Accessible
 - Not digital trace/social media data
-
- What is a dataset?
 - Treat each table in Eurostat, OECD, UN etc. as unique dataset
 - Unless dataset clearly subset of other dataset

QuantMig

Search Strategy

- Existing metadatabases:
 - KCMD data catalogue
 - Ethmig survey registry
 - REMINDER
 - PROMINSTAT
 - IOM GMDAC's Global Migration Data Portal
 - Migration Research Hub (Crossmigration)
- Big dataproviders Eurostat, OECD, World Bank, UNCHR etc.
- Checking projects funded by EU for data
- Consulted experts

Overview of key characteristics (1)

- Name, provider, source
- Data characteristics
 - Type of data – register, census, survey etc.
 - Design of data – cross-sectional, longitudinal etc.
 - Stock or Flow
 - Micro or macro data
- Migrant characteristics and definitions
 - Citizenship, country of birth, previous/next residence
 - Migrant type – labor, refugee, student etc.
 - Details on migration definition (time)

Overview of key characteristics (2)

- Coverage (geographical and temporal)
 - Origin and destination countries
 - Aggregation level (country, region)
 - Intra-EU
 - Years (data collection)
 - Update status
- Demographic characteristics
 - Sex
 - Age
 - Education
 - Labour/occupational status

Quality Assessment

- Aim: provide overview of relative strengths and weaknesses
- NOT ranking datasets from best to worst
- Different dimensions
- Acknowledge comparing accross different types of data is difficult
- User can decide what matters more

Quality Assessment dimensions

- ***Geographic coverage*** – origin and destination countries
- ***Migrant characteristics*** – 1 or more indicators: citizenship, previous/next residence, country of birth
- ***Target type*** – distinction in type of migrant, specific, not specified
- ***Completeness*** – register: origin-destination cell missings;
crossnational surveys: country missing; more weight to recent data!
- ***Timeliness*** – time between collection and publication and how recent data is

QuantMig

Overview Quality Assessment

Quality assessment indicator	High score	Medium score	Low score
Q1 Geographical coverage	≥ 100 origin/destination countries	>10 & <100 origin/destination countries	≤ 10 origin/destination countries
Q2 Migrant characteristics	3 indicators	2 indicators	1 indicator
Q3 Completeness	$<10\%$ missing	$>10\%$ & $<33.3\%$ missing	$>33.3\%$ missing
Q4 Target type	<i>Multiple migration types</i>	<i>One specific migrant type</i>	<i>Not specified</i>
Q5 Timeliness	T	T – 1	T – 2 or earlier

Browsable website version

- Can search through data inventory
- Links to data, documentation, reports
- Accessibility: open access, apply for access, or no (easy) access
- Can download selected search results!

www.quantmig.eu/data_inventory

Future

- Continue to update
- Beyond QuantMig
- Join forces - MPIDR Human migration database
- Move away from data from national statistical offices?
- More complete data from big data providers, combining data tables?

- Want to know your thoughts!
